Benefits of DART reporting

DART cuts costs and lowers the organizational overhead associated with reporting and consolidating data across the enterprise.

DART unlocks the power of "simplified reporting" design and the distribution process for all levels of organizational users and their day-to-day business needs.

DART leverages your value in your existing environment, and can easily integrate with existing applications and proprietary business models.

DART can be implemented rapidly, and utilized to make critical decisions that increase profits, serve customers better, and increase organizational efficiency.

DART does not require installation of any software on client workstations. This simplifies IT management.

DART controls security at multiple levels and also defines access to functions by user role, This makes it easy for organizations to manage user report privileges.

One system, multiple applications

DART is used by many different types of businesses with unique reporting functions :

- **Manufacturing:** Inventory Management, WIP, POs, Bill of Material, Order Management, Sales, Accounts Receivable, and other applications.
 - **Financial Services:** transaction reports, performance and P & L reports, risk reports, compliance and regulatory reports.
 - **Hospitals:** daily activity reports, patient information reports, resource utilization reports.
 - **Insurance:** sales and performance reports, risk reports, customer reports.
 - **Retail:** sales channel reports, stock reports, financial reports.
- Businesses require in-depth and timely analysis to respond to unusual patterns in production, sales and customer inquiries, and to perform value-added functions such as CRM, sales performance, distribution and logistics operations, as well as quality control.**

Before

Complex And Inefficient Reporting

The acquisition of DART and its extended information distribution resources is of strategic importance to the business community within the enterprise. DART can continuously offer new information reporting views of the entire organization's data and activity, and drill and mine that data rapidly for reporting purposes. The cornerstone of the DART approach to customer solutions is helping them to achieve more optimized and timely business information reporting.
